9:30 - 12:50 "In the not too distant future, we anticipate that the cyber threat will pose the greatest threat to our country." —Robert Mueller, Director of the FBI*

Information and Cyber Security

Malware, data breaches, denial of service, phishing, and other cyber attacks are proliferating. Highly publicized attacks on major corporations, governments, infrastructure, and financial organizations are in the news almost daily, underscoring the need for professionals who are trained to recognize and deal with cyber threats.

Cyber attacks can come in a variety of forms, but often the intent is malicious — an attempt to bring down a computer system, or an intrusion seeking to access and steal intellectual or proprietary data and information. At risk are such things as trade or industry secrets, corporate reputation, customer data including credit card information, and even physical damage to equipment. In fact, a recent report by the Office of the National Counterintelligence Executive highlighted the ease with which foreign collectors of economic information are able to operate in cyberspace with relatively little risk of detection by their private sector targets.

As governments and private entities become increasingly dependent on computer technology to transmit and store sensitive data, intellectual property, and financial transactions, the need for information security and risk analysis professionals will increase.

**Instructor: Professor William Amadio, Ph.D, Rider University
